## TABLE OF CONTENTS

Preface ..... iii
Executive Summary ..... iv
Basic Statistics ..... V
CHAPTER 1: CENSUS OVERVIEW ..... 1
1.1 Introduction ..... 2
1.2 Census definition ..... 2
1.3 Overall census objective ..... 2
1.4 Specific objectives ..... 2
1.5 History of census-taking in Seychelles ..... 2
1.6 Overview of legal framework and enumeration methodology ..... 4
1.7 International standards observed ..... 4
1.8 Cartographic preparation (mapping) ..... 4
1.9 The pilot census ..... 4
1.10 Training ..... 4
1.11 The main census enumeration ..... 5
1.12 Post Evaluation Survey (PES) ..... 5
1.13 Resources for 2010 census ..... 6
1.14 Staffing ..... 6
1.15 Challenges ..... 6
CHAPTER 2: POPULATION DISTRIBUTION \& DEMOGRAPHIC CHARACTERISTICS ..... 7
2.1 Geographical distribution ..... 8
Chart 1: Population distribution by enumeration area, Central Region ..... 10
Chart 2: Population distribution by enumeration area, East \& South Regions ..... 11
Chart 3: Population distribution by enumeration area, West Region ..... 12
Chart 4: Population distribution by enumeration area, North Region ..... 13
Chart 5: Population distribution by enumeration area, Praslin ..... 14
Chart 6: Population distribution by enumeration area, La Digue \& Inner Islands ..... 14
2.2 Population and household density ..... 15
2.3 Intercensal population change ..... 15
Chart 7: Population density by district, Mahe ..... 16
Chart 8: Population density - Praslin, La Digue \& Inner Islands ..... 17
Chart 9: Intercensal population change, Mahe ..... 18
Chart 10: Intercensal population change - Praslin, La Digue \& Inner Islands ..... 19
Chart 11: Intercensal household change - Mahe and satellites ..... 21
2.4 Age and sex composition ..... 22
2.5 Population distribution by age and sex ..... 25
2.6 Nationality ..... 26
2.7 Religion ..... 29
2.8 Marital status ..... 31
2.9 Fertility ..... 34
2.10 Disability ..... 35
2.11 Economic status of persons with disability ..... 36
CHAPTER 3: EDUCATION ..... 38
3.1 Educational characteristics ..... 39
3.2 Literacy ..... 41
CHAPTER 4: ECONOMIC STATUS AND ACTIVITY ..... 42
4.1 Economic status ..... 43
4.2 Labour force ..... 44
4.3 Occupation and industry ..... 47
4.4 Employment status and hours worked ..... 50
4.5 Unemployed job seekers ..... 51
4.6 Duration of time wanting work ..... 52
CHAPTER 5: HOUSING AND HOUSEHOLDS ..... 53
5.1 Housing and household characteristics ..... 54
5.2 Tenure ..... 55
5.3 Construction type ..... 55
5.4 Size of living quarters ..... 57
CHAPTER 6: UTILITIES, SANITATION \& TELECOMMUNICATION ..... 58
6.1 Water supply ..... 59
6.2 Sanitation ..... 60
6.3 Waste disposal ..... 61
6.4 Energy for lighting and cooking ..... 62
6.5 Other household amenities, information and telecommunication ..... 62
CHAPTER 7: TRANSPORT AND OTHER ASSETS ..... 64
7.1 Transport and other assets ..... 65
CHAPTER 8: LANGUAGE ..... 66
8.1 Main language used in the home ..... 67
CHAPTER 9: CRIME ..... 68
9.1 Crime ..... 69
CHAPTER 10: AGRICULTURE \& FISHING ..... 70
10.1 History of agriculture and fishing in Seychelles ..... 71
10.2 Crop farming ..... 72
10.3 Livestock rearing ..... 73
10.4 Fishing ..... 73
ANNEX 1 - Statistical Tables ..... 75
1.1 DEMOGRAPHY ..... 78
1.2 SOCIO-ECONOMIC ..... 149
1.3 HOUSING \& HOUSEHOLDS ..... 194
ANNEX 2 - Other Documents ..... 200

1. Census proclamation ..... 201
2. Appointment of Census Commissioner ..... 202
3. Oath of Secrecy ..... 203
4. Census questionnaire ..... 204
5. Census completed sticker ..... 217

## Preface

This report has been compiled by the National Bureau of Statistics (NBS) and it presents the results of the 2010 Population and Housing Census. It is the sixth in the series of censuses conducted since Independence. The previous censuses were conducted in 1977, 1987, 1994, 1997 and 2002.

At the continental level, there has been strong advocacy during the Africa Symposium on Statistical Development (ASSD), for all African countries to conduct a population and housing census during the "2010 Round of Population and Housing Censuses". Regional and sub regional organisations gave their full support to this continental initiative where Africa would take stock of its most valuable asset, its population. I am pleased to report that Seychelles has pledged its support and fulfilled the recommendation of this continentwide advocacy. The NBS conducted a Population and Housing Census in 2010.

The success of this census is attributed to the concerted effort and dedication of the management and staff of the Bureau and the team of temporary recruits, of whom a sizeable number were school teachers. Through their dedication and hard work in their respective roles as zone supervisors, supervisors, enumerators, drivers and not forgetting the data processing staff, this exercise was executed as planned and with professionalism. The production of this report is the fruit of the labour of all who were actively involved in the process of planning, data collection, processing and analysis.

Financial resources were also crucial to the success of the census operations. On this note, the Bureau acknowledges the support of the Seychelles Government, through the Ministry of Finance, for providing the necessary funds for the execution of this very important national exercise.

Helena De Letourdis
CENSUS COMMISSIONER

## Executive Summary

This report presents the results of the population and housing census that was conducted in August 2010. The main objectives of the census were to provide government, policy makers, planners and researchers with an update on the size and distribution of the population, and its demographic and socio-economic characteristics.

For the first time, questions on disability and crime were also included in the census questionnaire. The questions on disability sought to take stock and establish the profile of the population that had some form of physical and / or mental impairment either from birth or through accidents. The questions on crime were in relation to whether in the twelve months preceding the census, any member of the household had been subject to any form of crime committed against their person or their property.

Information on the housing stock, type, condition and tenure were also collected as well as amenities available in the households. Questions on economic activities carried out by the household related to agriculture and fishing and other home-based manufacturing activities.

The results are categorized in chapters and comparisons with results from earlier censuses are shown in tables and graphs. They reveal some distinct emerging trends in both the population demographics, housing, and household amenities.

On the population characteristics, the most prominent change in pattern is the very apparent shift in religious affiliations. The 2010 census recorded a total of over thirty different religious denominations compared to less than ten that existed in earlier censuses.

Also apparent is the size and composition of non-Seychellois residents. Residents of Indian nationality make up slightly over fifty percent of the total non-Seychellois residents, a significant increase in representation compared to the 2002 census results. This is no surprise as they make up the bulk of workers in the construction industry.

In the census, questions on fertility were asked of females as young as 10 years of age compared to 15 years in the earlier censuses. The reason for lowering the eligible age was on account of girls as young as 10 years who in recent years have become mothers.

In the area of housing and household, the results show an obvious shift in line with modernization. As society aspires to improvement in living conditions and new patterns in lifestyle, they move away from tradition. The change in housing construction depicts this shift very clearly where the type of housing construction has changed from wood to stone/block, with palm/lattice houses now being a thing of the past. Similarly, there is a marked increase in the use of modern telecommunication technology, household amenities and ownership of assets.

Agricultural activities are on the decline, particularly in the area of raising of livestock where the drop is quite dramatic. However, in the area of crop production, households still grow some vegetables and/or fruit as well as staples.

More households own fishing gear and do fishing activities for pleasure, compared to the 2002 census.
A Census Atlas with thematic maps on population and housing has been produced as a separate publication.

Detailed statistical tables are presented in Annex 1 of this report.

Basic Statistics Census Date: 26-30 August 2010

| POPULATION | 90,945 |
| :---: | :---: |
| Male | 46,912 |
| Female | 44,033 |
| Non-Seychellois residents | 7,798 (8.6\%) |
| Persons with disability | 2,169 (2.6\%) |
| Age distribution |  |
| 0-14 | 20,395 (22.4\%) |
| 15-64 | 63,809 (70.2\%) |
| 65+ | 6,741 (7.4\%) |
| Geographical distribution |  |
| Mahe | 79,005 |
| Praslin | 8,603 |
| La Digue ${ }^{1}$ | 2,761 |
| Other Islands | 576 |
| Greater Victoria² | 26,450 |
| ECONOMIC STATUS |  |
| Labour Force Composition |  |
| Employees | 50\% |
| Own account workers | 43\% |
| Unemployed job seekers | 6\% |
| Contributing family worker | 1\% |
| HOUSES (OCCUPIED) | 23,770 |
| of which |  |
| Stone / Block | 20,347 (86\%) |
| Wood /lron | 3,414 (14\%) |
| Palm /Lattice | 9 (0\%) |
| HOUSES (VACANT) | 2,161 |
| HOUSEHOLDS | 24,770 |
| TENURE |  |
| Owner Occupied | 17,524 (70.7\%) |
| Renting | 4,898 (19.8\%) |
| Rent Free | 2,348 (9.5\%) |
| Average household size | 3.7 persons |
| Percentage of households with |  |
| Electricity for lighting | (97.0) |
| LPG for cooking | (91.4) |
| Connection to mains water supply | (93.3) |
| Water tank | (47.1) |
| Improved sanitation (flush toilet) | (97.0) |

| Fridge /freezer | (93.4) |
| :---: | :---: |
| Washing machine | (69.4) |
| Television set | (94.6) |
| Cable TV | (35.0) |
| Telephone (land line) | (48.7) |
| Mobile phone | (90.0) |
| Computer | (37.8) |
| Connection to internet (via PC) | (18.2) |
| Motorable land transport | (26.8) |
| AGRICULTURE |  |
| Number of households farming |  |
| (Growing Crops) | 8,662 |
| Mainly for sale | 503 |
| Mainly subsistence | 7,468 |
| (Raising livestock) | 3,061 |
| FISHING |  |
| Number of households | 3,484 |
| of which |  |
| Mainly for sale | 608 |
| For pleasure | 1,711 |

${ }^{1}$ Includes Marianne, Felicite, Grande Soeur, Petite Soeur, Coco, Silhouette and North islands
${ }^{2}$ Includes English River, Mont Buxton, Saint Louis, Bel Air, Mont Fleuri, Plaisance, Les Mamelles and Roche Caiman districts

26th - 30th Aug 2010

## CHAPTER 1

## CENSUS OVERVIEW

### 1.1. Introduction

A national census of population and housing was conducted in 2010, with the main enumeration of dwellings and the people living therein taking place between $26^{\text {th }}$ to $30^{\text {th }}$ August. The last similar exercise of this scale was done in 2002, when the census counted 21,015 dwelling units and 81,755 individuals living in 20,933 households (including institutional populations).

The Seychelles 2010 census coincided well with the 2010 "World Programme on Population and Housing Censuses".

### 1.2 Census definition

A population census is the total process of collecting compiling, evaluating, analysing and publishing or otherwise disseminating demographic, economic, and social data pertaining, at a specified time, to all persons in a country or in a well delimited part of a country.

A housing census is the total process of collecting, compiling, evaluating, analysing and publishing or otherwise disseminating statistical data pertaining, at a specified time, to all living quarters and occupants thereof in a country or well-defined part of a country.

### 1.3 Overall census objective

The main objective of the population and housing census is to collect demographic and socio-economic data as well as data on housing and other key information that will provide policy makers and planners with the basis for sound decision making. The census data also serves as benchmark data for various research programmes.

### 1.4 Specific objectives

## > Administrative

- Demarcation of constituencies
- Allocation of resources

## > Planning \& policy formulation

- Development of settlements and housing programs
- Schools and educational infrastructure
- Employment and welfare programs
- Impact assessment and protection of the environment
- Health and food security

### 1.5 History of census-taking in Seychelles

Table 1.1 presents a series of population counts for censuses taken since the late 1700's to date with the corresponding annual growth rates.

Table 1.1: History of census taking 1771-2010

| Census Year | Population count | Growth rate \% |
| :---: | :---: | :---: |
| 1771 | 28 |  |
| 1789 | 591 | 16.9 |
| 1801 | 2,121 | 10.6 |
| 1807 | 2,759 | 4.4 |
| 1821 | 5,782 | 5.3 |
| 1840 | 4,360 | -1.5 |
| 1851 | 6,841 | 4.1 |
| 1861 | 7,580 | 1.0 |
| 1871 | 11,179 | 3.9 |
| 1881 | 14,191 | 2.4 |
| 1891 | 16,440 | 1.5 |
| 1901 | 19,237 | 1.6 |
| 1911 | 22,691 | 1.7 |
| 1921 | 24,523 | 0.8 |
| 1931 | 27,444 | 1.1 |
| 1947 | 34,632 | 1.5 |
| 1960 | 41,425 | 1.4 |
| 1977 | 61,786 | 2.4 |
| 1987 | 68,499 | 1.0 |
| 1994 | 74,331 | 1.2 |
| 2002 | 81,755 | 1.2 |
| 2010 | 90,945 | 1.3 |

The early censuses were basically population counts. Over time, this has evolved into more complex and detailed enquiries administering questionnaires. These tools were divided in theme-specific sections that collect data on all aspects of the population ranging from demographic details, socio-economic aspects, fertility and disability to housing amenities, information and communication and agriculture.

The population in 2010 is almost 5 times the size of the population at the beginning of the $20^{\text {th }}$ century, and 43 times what it was at the onset of the $19^{\text {th }}$ century.

Table 1.2 provides a count of the number of questions asked in the census series from 1971-2010. While the questions on individuals have not differed significantly, except between the 2002 and the 2010 census where the number of questions increased by half, the questions on housing have constantly increased from 14 in 1971 to almost 3 times higher in 2010.

Table 1.2: Evolution of census questionnaires between 1971 and 2010

|  | Number of questions on: |  |
| :--- | :---: | :---: |
| Census year | Population | Housing / house- <br> holds |
| 1971 | 19 | 14 |
| 1977 | 14 | 19 |
| 1987 | 16 | 20 |
| 1994 | 21 | 21 |
| 2002 | 19 | 35 |
| 2010 | 29 | 40 |

### 1.6 Overview of legal framework and enumeration methodology

Census taking in Seychelles is governed by the Census Act (Cap 25). The President issues a proclamation and appoints the Census Commissioner. The proclamation is made public through a gazette notice and the Census Commissioner then appoints all census officers (field, technical, administrative and other). Appointments are formalised by the signing of the "Census Oath of Secrecy" by each census officer.

The census adopted the "de jure" method which entailed a complete count of the resident population present from the 26 th to 30 th August 2010, including those who were temporarily absent for up to 3 months beyond the start of the main census dates. This provision took into consideration household members who were out of the country for a short duration during the census taking. Household members were counted by identifying usual residents with the 3 -month time-frame criterion for inclusion. That is, a household member who was absent from his/her usual place of residence for more than 3 months would be counted at his/her place of current residence at the time of enumeration. Trained personnel collected the data by administering a precoded questionnaire in face-to- face interviews. The unit of enumeration was the individual identified through lists of households and institutions on census area maps, as well as temporary dwellings such as boats and outdoor shelters.

## The census was implemented in three phases:

> Pre-enumeration phase (preparatory activities)
> Enumeration phase (data collection)
> Post-enumeration phase (data coding, data capture, data validation, analysis and publication / dissemination).

The questionnaire allowed for the identification of census enumeration areas and administrative districts which also serve as political constituencies. The pre-data capture process entailed a first round of coding followed by a round of code verification by different data processors. Data was captured manually using a software program designed specifically for the census questionnaire. As part of quality checks in the data capture process, the double-entry method was adopted followed by autodata validation and correction. The main data cleaning process ended in June 2011.

### 1.7 International standards observed

The 2010 census was guided by the United Nations (UN) manual on "Principles \& Recommendations for 2010 Round of Population and Housing Censuses". For coding, the classifications used were the ILO's International Standard Classification of Occupation 2008 (ISCO 2008) for occupation, the UN International Standard Industrial Classification (ISIC Revision 4) for economic activity / industry and the International Organisation for Standardisation (ISO 3166) for country codes.

### 1.8 Cartographic preparation (mapping)

More than 600 enumeration area (EA) maps were created during the pre-census cartographic exercise for the three main islands. Each such area comprised of 50 to 70 dwelling units. The EA boundaries were delimited in such a way primarily to make the workload for each field worker manageable and secondly, to demarcate each area distinctly to ensure complete coverage and avoid double counting of households. The outer islands each represent an individual EA.

### 1.9 The pilot census

For the pilot census, the district of Anse Boileau, in the west of the main island, Mahe, was completely enumerated. The district was selected because it was deemed to have a balanced mix of attributes to avail the undertaking of a comprehensive exercise in piloting the census. The topography provided difficult terrains as well as fairly easily accessible areas. Its distance from the main headquarters also gave the team an opportunity to test the logistics in place to displace staff and field materials. The district is divided into 14 EAs and the pilot exercise served to train 50 staff and test all aspects of the census operations. The exercise was carried out from 29 th April to 3rd May 2010 complete with a post-enumeration survey (PES) of 2 EAs. A smaller team of 10 staff was trained to conduct the post enumeration survey from $14^{\text {th }}$ to $16^{\text {th }}$ May. The exercise collected information on households as they were at the time of the survey, and indicated which members were new to the household since the pilot census. The combined procedure approach sought to establish where household members were during the census; and where others who were in the households may have moved to. The pilot PES collected data on name, sex, age, marital status, education and movement details of household members that occurred between the pilot census and the PES.

### 1.10 Training

A total of 12 training workshops was organised between April and August 2010 to prepare staff for census enumeration. Training for field staff was organised at regional level, with the majority of staff who participated in the pilot census taking on the role of facilitators or guiding role play sessions. 3-day training workshops were organised for each region and managed by staff of the Bureau and other officers who had been trained in previous workshops. Two separate workshops were run for the Central region due to the size of the workforce. All training workshops for the main census conducted on Mahe took place simultaneously nearer the census dates, while three separate workshops for staff who would work on Praslin and La Digue islands were run earlier towards the end of June and beginning of July. All training workshops included detailed explanations on the purpose of the census, interviewing techniques, thorough review of the field tool and practical sessions of role plays. The last sessions of the workshops entailed field visits to train data collectors on how to use field maps and on orientation.

### 1.11 The main census enumeration

Due to administrative and logistic constraints, enumeration on the island of Silhouette and some of the satellites of the main islands had to be carried out during the few weeks preceding the main census dates. A team of 12 trained supervisors and enumerators was deployed on the 9th July to enumerate inhabitants on Silhouette. The team stayed 2 nights to interview households that comprised mainly hotel staff and a few other households with members working for the Island Development Company (IDC), and public sector workers employed by the Ministry of Education and the Ministry of Health. Other smaller teams or individuals were deployed to Bird, Denis, D'Arros, Cerf and North islands. Special training sessions were given to senior staff of the IDC for them to enumerate households on islands under IDC management.

The country was divided into 8 zones made up of regions. There were altogether 7 zones for Mahe, Praslin and La Digue. An 8th zone was created to cater for institutional populations such as those living in construction workers barracks, convents, orphanages and the prison. Special arrangements were made to carry out enumeration on the outer islands and satellites. The majority of households were enumerated between the 26th and 30th August
2010. After the main enumeration, it was estimated that some 2,000 households were yet to be covered for various reasons, but mainly due to absence of whole households or that of a responsible adult who could provide the data on behalf of the household. Since August is a month of public school holidays, a significant number of families choose to travel abroad during this period. Consequently, the enumeration continued with a smaller task force canvassing all the districts carrying out call backs for another two months.

### 1.12 Post Evaluation Survey (PES)

A total of 18 EAs from 14 districts was selected and completely re-enumerated for the evaluation exercise using a revised version of the pilot PES questionnaire. A total of around 777 or $3 \%$ of houses were targeted to be covered for this special exercise. As was the case in the pilot survey, the exercise aimed to capture movement of household members and reconstitute the households as they were at the time of the main enumeration. The exercise was carried out in December 2010, 4 months after the main census enumeration, by a 35 -strong team of field staff. The details of the PES sample are provided in Table 1.3. However, the analysis of the PES data will be dealt with in a separate technical report.

Table 1.3: PES zones, districts and enumeration areas, 2010

| No. | District | Houses in EA | Houses in District | Houses <br> in Zone | Average/ Person |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | Anse Etoile | 48 | 48 |  |  |
| 2 | Belombre | 47 | 47 | 95 | 24 |
| 3 | Mont Buxton | 50 | 50 |  |  |
| 4 | English River | 71 | 71 | 121 | 30 |
| 5 | Les Mamelles (*) | $33+36$ | 69 |  |  |
| 6 | Plaisance | 40 | 40 | 109 | 27 |
| 7 | Au Cap | 45 | 45 |  |  |
| 8 | Anse Aux Pins (*) | $22+29$ | 51 | 96 | 24 |
| 9 | Anse Royale | 53 | 53 |  |  |
| 10 | Baie Lazare | 59 | 59 | 112 | 28 |
| 11 | Grand Anse Mahe (*) | 18+37 | 55 |  |  |
| 12 | Port Glaud (*) | $25+29$ | 54 | 109 | 27 |
| 13 | Grand Anse Praslin | 72 | 72 |  |  |
| 14 | Baie Sainte Anne | 63 | 63 | 135 | 34 |
|  | Total | 777 | 777 | 777 |  |

Note: (*) 2 EAs were sampled to match house counts in other districts

## Population \& Housing Census 2010

### 1.13 Resources for 2010 census

The 2010 population \& housing census exercise was fully funded by the government of Seychelles through a special budget allocation amounting to SR 3.7 million. Table 1.4 presents a summary of the main components of the budget.

Table 1.4: Summary of the census budget

| Description | Amount (SR) | Amount (US\$)1 | \% of Budget |
| :---: | :---: | :---: | :---: |
| Personnel | 1,505,000 | 140,000 | 42 |
| Training | 522,925 | 48,644 | 15 |
| Consumables (stationery, etc.) | 181,000 | 16,837 | 5 |
| Equipment | 435,500 | 40,512 | 12 |
| Transport, Travel \& Communication | 320,500 | 29,814 | 9 |
| Software | 60,000 | 5,581 | 2 |
| Printing and Dissemination Cost | 540,000 | 50,233 | 15 |
| Total | 3,564,925 | 331,621 | 100 |
| Contingency | 178,246 | 16,581 |  |
| Grand Total | 3,743,171 | 348,202 |  |

Note: (1) 2010 annual average exchange rate applied

### 1.14 Staffing

The field staff which constituted mostly teachers and other public service officers was recruited in collaboration with the Ministry of Education and the Ministry of Health. A large proportion of the field staff already had experience in census data collection. Permanent staff of the NBS played supervisory roles as well as enumerators. Employees from both the public and private sectors were recruited and trained to assist with data processing

### 1.15 Challenges

Some of the challenges faced during the preparation of the census included the following:

- Late approval for census-taking and proclamation by the relevant authorities.
- Limited time to organise, confirm and put the necessary logistics in place.
- Limited time to recruit staff and organise training.
- Unexpected inflated costs of media publicity.
- Complex and expensive logistics for enumeration of satellite and outer islands.
- Lack of local expertise/personnel to form technical teams to handle the various aspects of the census. This lead to small teams of individuals doubling up to assume key roles.

## CHAPTER 2

## POPULATION DISTRIBUTION \& DEMOGRAPHIC CHARACTERISTICS

### 2.1 Geographical distribution

A total of 90,945 persons were counted in the 2010 population and housing census. The central region is defined by grouping the 8 administrative districts that fall within and around the capital Victoria. This region accounts for the largest concentration of people and represents $29 \%$ of the total population. The second largest region combines 6 districts situated on the east and south coasts of the main island of Mahe, and constitutes $25 \%$ of the population. The smallest region is formed by the inner islands of Praslin (the second largest island), La Digue and Silhouette islands.

Together, these 3 islands represent around $13 \%$ of the total population. Readers are to note that previous censuses grouped Silhouette island together with "Outer Islands". For purposes of consistency with electoral boundaries, Silhouette is now classified with "Inner Islands". For this reason, caution should be exercised when comparing growth (or decline) in the Inner Island region and on outer islands using previous census data. The population in the Central and North regions have decreased slightly while in other regions, it has increased (Table 2.1).

Table 2.1: Population distribution by sex and geographical areas (island \& region), 2010

|  |  | Female | Male | Total | \% |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Region | Districts included |  |  |  | 2010 | 2002 |
| Central | (English River, Mont Buxton, Saint Louis, Bel Air, Mont Fleuri, Plaisance, Roche Caiman, Les Mamelles) | 13,156 | 13,294 | 26,450 | 29.1 | 30.6 |
| East/South | (Cascade, Pointe Larue, Anse Aux Pins, Au Cap, Anse Royale, Takamaka) | 11,002 | 11,412 | 22,414 | 24.6 | 23.5 |

| Port Glaud | 1,182 | 1,390 | 2,572 | 2.8 | 644 | 2.6 |
| Pointe Larue | 1,531 | 1,540 | 3,071 | 3.4 | 836 | 3.4 |
| Roche Caiman | 1,357 | 1,875 | 3,232 | 3.6 | 725 | 2.9 |
| Saint Louis | 1,624 | 1,585 | 3,209 | 3.5 | 880 | 3.6 |
| Takamaka | 1,405 | 1,420 | 2,825 | 3.1 | 777 | 3.1 |
| Total | 44,033 | 46,912 | 90,945 | 100.0 | 24,770 | 100.0 |

The most populated district is Baie Sainte Anne followed by Anse Etoile, Cascade and Au Cap. Other districts with populations of more than 4,000 inhabitants are English River, Anse Royale, Beau Vallon and Anse Boileau. Cascade has been traditionally ranked among the relatively low-population districts. The 2010 census enumerated expatriate camps of construction workers falling within the Cascade boundaries, hence inflating
the population of this district. The least populated districts were Port Glaud, Les Mamelles, Takamaka and Bel Air (in that order), all with populations of less than 3,000 inhabitants (Table 2.2).

Charts (1-6) provide graphical representations of the population distribution for the different regions. The smallest geographical divisions are enumeration areas.

Chart 1: Population distribution by enumeration area, Central Region

Chart 6: Population distribution by enumeration area, La Digue \& Inner Islands

### 2.2 Population and household density

The nominal population density of Seychelles (i.e. discounting the fact that some areas are uninhabited) is around 200 persons per square kilometre. However, if one takes into account only the inhabited areas of the main islands, the actual density can go over 4,000 persons per square kilometre in some districts (Roche Caiman, for example). Charts 7 and 8 show actual population densities of districts on the three main islands of Mahe, Praslin and La Digue, and their satellites. It can be observed that the most densely populated districts are Saint Louis, Mont Buxton and English River in the Central Region and Anse Aux Pins in the East Region (Chart 7). In general, apart from the two most densely populated districts of Anse Aux Pins and Pointe Larue in the Eastern part of Mahe, the population is more concentrated in areas closer to the town of Victoria and its suburbs. On the Inner islands, La Digue is more densely populated than both districts on Praslin (Chart 8).

The corresponding figures on density are provided in Table 2.3 for each district. Table 2.3 also presents data on the distribution of households on Mahe. The district with the largest number of households is Baie Sainte Anne followed by Anse Etoile, both with over 1,300 households. Port Glaud, although being one of the districts with the
largest area, has the smallest number of households with less than half that in Baie Sainte Anne or Anse Etoile. Intercensal changes in household numbers are presented in Chart 11. All districts have experienced growth in the number of households, but with varying levels. The districts with the highest rate of increase in number of households include Grand Anse Mahe, Cascade, Pointe Larue, Au Cap, Baie Lazare, Takamaka and Anse Etoile. It should be noted that new housing estates were developed in most of the aforementioned districts during the period under observation. The rate of growth in households ranges between $18 \%$ and $25 \%$

### 2.3 Intercensal population change

A comparison of district populations between the previous and the current census reveals that most districts have experienced a growth in their population and very few have experienced declines. Graphical representations of the changes are shown in Charts 9 and 10. The changes are expressed in percentages of the respective district population at the 2002 population and housing census. La Digue, Baie Sainte Anne, Cascade and Au Cap have experienced the highest growth rate ranging from $22 \%$ to $28 \%$, while a decline of between $3 \%$ to $5 \%$ was recorded in the population for the Mont Fleuri district.

## Population \& Housing Census 2010

### 2.4 Age and sex composition

The 90,945 persons enumerated in the census comprised 46,912 or $52 \%$ males and 44,033 or $48 \%$ females. Most of the censuses prior to 2002 indicated higher counts of females than males, but in the two most recent censuses (2002 and 2010) we seem to be observing a reverse of this trend. This change may well be accounted for by the changing population composition in the working ages attributed in particular to foreign labour, which is mainly male dominated (in the construction industry in particular). The changing trend can be observed in Figure 2.1.

Figures (2.2-2.5) present a set of population pyramids for the 1994, 2002 and 2010 censuses. Two salient features are observed from the graphical representations. One is that there is evidence of a slowly ageing population. This can be observed in the changing shape of the pyramids from a wider base in earlier censuses to a narrowing structure at the younger ages for the more recent census. Two pyramids, Figures (2.4 and 2.5), have been constructed for the 2010 census. Figure 2.5 excludes the non-Seychellois residents in the working ages. The comparison between the two structures illustrates the point made earlier with regards to possible reasons for the decline in the proportion represented by females in the population.

Population \& Housing Census 2010

### 2.5 Population distribution by age and sex

Table 2.4: Population by age group and sex, 2010

| Age (completed years) | Female | Male | Total |
| :---: | :---: | :---: | :---: |
| 0-4 | 3,420 | 3,499 | 6,919 |
| 5-9 | 3,351 | 3,380 | 6,731 |
| 10-14 | 3,296 | 3,449 | 6,745 |
| 15-19 | 3,604 | 3,848 | 7,452 |
| 20-24 | 3,337 | 4,150 | 7,487 |
| 25-29 | 3,419 | 4,385 | 7,804 |
| 30-34 | 3,606 | 4,158 | 7,764 |
| 35-39 | 3,566 | 4,186 | 7,752 |
| 40-44 | 3,549 | 3,736 | 7,285 |
| 45-49 | 3,316 | 3,507 | 6,823 |
| 50-54 | 2,568 | 2,885 | 5,453 |
| 55-59 | 1,595 | 1,766 | 3,361 |
| 60-64 | 1,308 | 1,320 | 2,628 |
| 65-69 | 1,063 | 958 | 2,021 |
| 70-74 | 1,050 | 713 | 1,763 |
| 75-79 | 873 | 502 | 1,375 |
| 80-84 | 581 | 288 | 869 |
| 85-89 | 345 | 138 | 483 |
| 90-94 | 134 | 36 | 170 |
| 95-99 | 44 | 8 | 52 |
| 100+ | 8 | 0 | 8 |

Corresponding figures of population by age group and sex are given in Table 2.4. Another indication of an ageing population is provided by the median age. The median age is the age at which half of the population is older and the other half is younger. The median age was 23 years in 1987. It increased to 26 years in 1997, and was measured at 28.6 years in 2002. Over the last 8 years the median age has increased further to 31 years. Our population can now be considered as a "mature" if not "old" population.

The age dependency ratio is now 425 persons compared to 503 in 2002. The downward shift in this indicator may be partly explained as the result of people moving into the working age with no corresponding increase in fertility levels. On the other hand, this phenomenon is partly explained by the presence of a large number of migrant workers which has inflated the size of the working-age population.

The child-dependency ratio has decreased from 386 per thousand of the working age population in 2002 to 320 in 2010 (Table 2.5).

Table 2.5: Age dependency ratios, 2002 \& 2010

| Age group (years) | Census Year |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  | 2010 | 2002 | 2010 | 2002 |
|  | Number |  | \% |  |
| 0-14 | 20,395 | 21,022 | 22.4 | 25.7 |
| 15-64 | 63,809 | 54,394 | 70.2 | 66.5 |
| $65+$ | 6,741 | 6,339 | 7.4 | 7.8 |
| Total | 90,945 | 81,755 | 100.0 | 100.0 |
| Age dependency ratio | 425 | 503 |  |  |

Population \& Housing Census 2010

### 2.6 Nationality

Table 2.6: Population by nationality, 2010

| Nationality (country) | Population | \% |
| :---: | :---: | :---: |
| Seychelles | 83,147 | 91.4 |
| India | 3,977 | 4.4 |
| Madagascar | 493 | 0.5 |
| Philippines | 433 | 0.5 |
| Sri Lanka | 368 | 0.4 |
| Mauritius | 340 | 0.4 |
| China | 314 | 0.3 |
| Other Europe | 291 | 0.3 |
| Kenya | 252 | 0.3 |
| Other Africa | 241 | 0.3 |
| United Kingdom | 178 | 0.2 |
| South Africa | 157 | 0.2 |
| France | 147 | 0.2 |
| Thailand | 147 | 0.2 |
| Bangladesh | 136 | 0.1 |
| Other Asia | 122 | 0.1 |
| Nepal | 101 | 0.1 |
| Other | 101 | 0.1 |
| Total | 90,945 | 100.0 |

Around $9 \%$ of residents in Seychelles are non-Seychellois.

The predominant nationality among the non-Seychellois is Indian. Indians represent just over half of all non-nationals.
\{Figure 2.6\}

Population \& Housing Census 2010
Table 2.7: Proportional representation of selected nationalities, (2002 \& 2010)

|  | $\mathbf{2 0 1 0}$ | $\mathbf{2 0 0 2}$ |
| :--- | ---: | ---: |
| Nationality (country) | \% | \% |
| India | 51.0 | 31.1 |
| Madagascar | 6.3 | 8.1 |
| Philippines | 5.6 | 7.2 |
| Sri Lanka | 4.7 | 7.2 |
| Mauritius | 4.4 | 7.8 |
| Kenya | 3.2 | 5.1 |
| United Kingdom | 2.3 | 2.7 |
| France | 1.9 | 2.4 |
| Thailand | 1.9 | 7.2 |

Apart from an increase in the proportional representation of nonSeychellois, the composition of nonnationals has changed significantly.

There is an increase in the representation of Indian nationals, from $31 \%$ in 2002 to $51 \%$ in 2010, whereas the proportion for all other nationalities has decreased.

Table 2.8: Non-Seychellois population by age group and sex, 2010

| Age group | Female | Male | Total |
| :---: | :---: | :---: | :---: |
| 0-4 | 74 | 70 | 144 |
| 5-9 | 56 | 59 | 115 |
| 10-14 | 56 | 63 | 119 |
| 15-19 | 44 | 138 | 182 |
| 20-24 | 110 | 797 | 907 |
| 25-29 | 274 | 1,113 | 1,387 |
| 30-34 | 344 | 1,056 | 1,400 |
| 35-39 | 331 | 975 | 1,306 |
| 40-44 | 245 | 646 | 891 |
| 45-49 | 162 | 479 | 641 |
| 50-54 | 111 | 267 | 378 |
| 55-59 | 61 | 91 | 152 |
| 60-64 | 28 | 66 | 94 |
| $65+$ | 33 | 49 | 82 |
| Total | 1,929 | 5,869 | 7,798 |

Around 8,000 non-Seychellois were counted in the census, of which $75 \%$ are males.

1 in every 20 non-Seychellois is a child aged less than 15 years.

3 out of 4 are in their prime working-age (20-44).

### 2.7 Religion

Table 2.9: Population by religious affiliation, 2010

| Religion | No. of persons | \% |
| :---: | :---: | :---: |
| Roman Catholic | 69,277 | 76.2 |
| Anglican | 5,585 | 6.1 |
| Hindu | 2,174 | 2.4 |
| Islam | 1,459 | 1.6 |
| Pentecostal Assembly | 1,333 | 1.5 |
| 7th Day Adventist | 1,128 | 1.2 |
| No Religion | 840 | 0.9 |
| Assembly of God | 831 | 0.9 |
| Jehovah's Witness | 683 | 0.8 |
| Born Again Christian | 605 | 0.7 |
| Baha'i | 522 | 0.6 |
| Redeemed Christian Church | 394 | 0.4 |
| Buddhist | 331 | 0.4 |
| Christians Unspecified Denomination | 322 | 0.4 |
| Christian Community Fellowship | 241 | 0.3 |
| Other Christian | 112 | 0.1 |
| Nazarite Christian | 109 | 0.1 |
| Other non-Christian | 108 | 0.1 |
| Orthodox | 97 | 0.1 |
| Neo Apostolic | 69 | 0.1 |
| Taoism | 62 | 0.1 |
| Grace and Peace | 52 | 0.1 |
| Deeper Life | 50 | 0.1 |
| Church of Christ | 42 | 0.0 |
| Christ Holiness Church | 40 | 0.0 |
| Christian Church of England | 29 | 0.0 |
| Baptist | 28 | 0.0 |
| New Testament Church | 27 | 0.0 |
| Methodist | 24 | 0.0 |
| Protestant Christian | 23 | 0.0 |
| Latin Catholic | 20 | 0.0 |
| Not stated | 4,328 | 4.8 |
| Total | 90,945 | 100.0 |

A subject that has been attracting a lot of local interest recently is that of religion. In previous censuses, the 7 most common religions in Seychelles were identified and responses were coded accordingly during data collection. All other religions were aggregated either as "Other Christians" or as "Other non-Christians". However, due to a rise in demand for more disaggregated data on current practices and representation, postcoded data was collected on religion.

The Seychelles has traditionally been a Christian country with 9 out of 10 persons reporting to be Christians for the past four Population and Housing Censuses (1987 - 2010). The most predominant Christian denomination has been the Roman Catholic Church followed by the Anglican Church. However, with the registration and penetration of new religious groups that were not present in Seychelles before, the last couple of decades have seen continuous shifts between and within main groups. The full details of all religious affiliation reported are presented in Table 2.9. At the time of census data processing in 2010, the Registry Office reported a total number of 32 registered religious organisations or associations. The population census classified a total of 30 different religious groups with which people reported to be associated. It must be noted that some individuals did not actually specify any religion but said they were simply "Christians".

An analysis of the religious affiliation data series for the four most recent censuses reveal two emerging patterns:
(1) The proportional representation of Christians continues to drop; and (2) The composition of Christian groups changes, with members of the two main denominations (Roman Catholic and Anglican) shifting to other denominations. The changing trends are depicted in Figures 2.7 and 2.8. The trend analysis discounts the "Not stated" cases shown in Table 2.9.

Notes: Right-Hand axis relates to "Christians" and "Roman Catholic"

### 2.8 Marital status

Table 2.10: Population aged 15 years or more by marital status and sex, 2010

| Marital status | Female | \% | Male | \% | Total | \% | \% female -\% male (All residents) | \% female -\% male (Seychellois residents) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Single (never married) | 13,939 | 41.0 | 15,398 | 42.1 | 29,337 | 41.6 | -1.0 | -4.7 |
| Married | 8,450 | 24.9 | 8,917 | 24.4 | 17,367 | 24.6 | 0.5 | -0.5 |
| Cohabiting | 7,083 | 20.9 | 7,075 | 19.3 | 14,158 | 20.1 | 1.5 | -0.8 |
| Separated | 635 | 1.9 | 352 | 1.0 | 987 | 1.4 | 0.9 | 0.8 |
| Divorced | 928 | 2.7 | 545 | 1.5 | 1,473 | 2.1 | 1.2 | 1.1 |
| Widowed | 1,957 | 5.8 | 417 | 1.1 | 2,374 | 3.4 | 4.6 | 4.7 |
| Not stated | 974 | 2.9 | 3,880 | 10.6 | 4,854 | 6.9 | -7.7 | -0.6 |
| Total | 33,966 | 100 | 36,584 | 100 | 70,550 | 100 |  |  |

A question on marital status was asked of every person. Table 2.10, however, presents data only for the population aged 15 years or more. The distribution across categories of marital status is similar for male and female who are single (never married) but different for all other categories. The proportional representation within sex is higher for women who live in cohabitation, are separated, or divorced, compared to the corresponding categories among men. Among singles, men have a higher representation than women. The high percentage of "not stated" categories among men is partly attributed to the inability to obtain some of the demographic and socio-economic data for institutional populations for whom only lists of names with economic details were retrieved from the employing agencies. This factor may have distorted the distribution slightly, and this is
evident when comparing the differences in percentage distribution between male and female for the "not stated" category. On the other hand, when only Seychellois residents are considered, the difference in "single status" is more pronounced. The situation is reversed for married and cohabiting categories, whereby males in union are in higher proportions than the corresponding female groups.

Although the minimum legal age for marriage is 18 years without consent, and 15 years with parental consent, it may be of interest to look at marital status for the younger ages as well. Disaggregated data for adolescents aged less than 18 is presented separately in Table 2.11.

Table 2.11: Adolescents aged 12 to 17 years by marital status, 2010

| Marital status |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Age (years) | Single (never married) | Married | Cohabiting | Not stated | Total |
| 12 | 1,240 | 0 | 0 | 0 | 1,240 |
| 13 | 1,446 | 0 | 0 | 0 | 1,447 |
| 14 | 1,453 | 0 | 1 | 0 | 1,455 |
| 15 | 1,411 | 0 | 2 | 15 | 1,428 |
| 16 | 1,560 | 1 | 11 | 18 | 1,590 |
| 17 | 1,420 | 1 | 40 | 25 | 1,486 |
|  | 8,532 | 2 | 54 | 58 | 8,646 |

The changing patterns in marital status across age groups can be observed in Figure 2.9. The proportional representation of singles naturally dwindles with increasing age, while that for married increases as age increases. Cohabiting status is more popular among those aged 25 to 44 years, but then decreases in proportion from age 45 years. The highest proportions of those who are either divorced or separated are observed among individuals of 40 to 64 years.

There is at least 1 in every 100 adolescents aged 15 to 17 years living in union. Of those, $4 \%$ are married and $91 \%$ are girls.

A comparison of the percentage distribution of males and females within broad categories of marital status is presented in Table 2.12a. Four main groups of marital status are considered; those who are single (never married), those living in union (married or co-habiting), a third group that is either separated or divorced and those who are widowed. The pattern that seems to emerge is that women above the age of 40 years are more likely to be living out of union than men in the corresponding ages. Among those who are separated or divorced, the proportional representation among women is higher for all but three age groups. Within the age group 3539 years, the comparative distribution of marital status is more balanced.

Women above the age of 40 years are more likely to be living out of union than men in the same age group.

Table 2.12a: Population aged 15 years or more by age group, marital status and sex, 2010

- (\% distribution within marital status)

| Marital status |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Single |  | Married/Cohabiting |  | Separated/Divorced |  | Widowed |  | Total |  |
| Age group | Female | Male | Female | Male | Female | Male | Female | Male | Female | Male |
| 15-19 | 23.5 | 23.1 | 1.5 | 0.4 | 0.1 | 0.0 | 0.0 | 0.0 | 10.8 | 11.3 |
| 20-24 | 15.7 | 18.6 | 6.5 | 3.4 | 1.3 | 0.3 | 0.0 | 0.2 | 9.8 | 10.6 |
| 25-29 | 11.6 | 14.3 | 10.3 | 8.6 | 3.7 | 2.3 | 0.2 | 0.2 | 10.0 | 11.1 |
| 30-34 | 9.4 | 10.2 | 13.1 | 11.8 | 6.6 | 6.1 | 0.5 | 0.0 | 10.5 | 10.7 |
| 35-39 | 8.3 | 8.3 | 13.5 | 13.6 | 9.1 | 9.4 | 1.0 | 1.2 | 10.3 | 10.8 |
| 40-44 | 7.7 | 6.5 | 13.7 | 14.1 | 12.0 | 8.7 | 1.5 | 2.4 | 10.3 | 10.1 |
| 45-49 | 6.6 | 6.1 | 12.8 | 13.6 | 17.2 | 13.4 | 3.4 | 2.4 | 9.8 | 9.8 |
| 50-54 | 4.8 | 4.7 | 9.8 | 11.7 | 15.9 | 16.1 | 3.7 | 5.4 | 7.6 | 8.4 |
| 55-59 | 2.9 | 2.7 | 5.8 | 7.6 | 11.0 | 11.8 | 5.1 | 4.7 | 4.8 | 5.3 |
| 60-64 | 2.3 | 1.9 | 4.5 | 5.5 | 7.2 | 12.8 | 8.8 | 5.7 | 3.9 | 4.0 |
| 65+ | 7.2 | 3.6 | 8.4 | 9.8 | 16.0 | 19.1 | 75.9 | 77.8 | 12.3 | 8.0 |
| Total | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 |

Table 2.12b: Population aged 15 years or more by broad age group, marital status and sex, 2010 - (\% distribution within marital status)

| Age group | Single | Married | Cohabiting | Separated | Divorced | Widowed | Total |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
| $15-19$ | 96 | 0 | 4 | 0 | 0 | 0 | 100 |
| $20-39$ | 53 | 20 | 25 | 1 | 1 | 0 |  |
| $40-64$ | 28 | 39 | 24 | 2 | 4 | 2 | 100 |
| $65+$ | 24 | 35 | 8 | 3 | 3 | 100 |  |

Among the population aged 20-39 years, one in every five is married and one in every four is cohabiting, whereas in age group 40-64 years, one in every three is married and one in every four lives in cohabitation. There are young adolescents aged less than 15 years who have been reported to be living in union. This fact corroborates with data on adolescent pregnancies and
births recorded for girls as young as 10 years old. Auxiliary data from vital registration records presented in Table 2.13 traces the trend in births to adolescents aged less than 15 years from 2001 to 2010. The rate of birth to adolescents is presumably higher than what is shown. The real rate is thwarted due to the fact that some pregnancies end in abortions.

Table 2.13: Births and abortions to adolescents aged less than 15 years, 2001-2010

| Year | 2001 | 2002 | 2003 | 2004 | 2005 | 2006 | 2007 | 2008 | 2009 | 2010 |

## Population \& Housing Census 2010

### 2.9 Fertility

Questions on fertility were asked about girls and women aged 10 years or more. The lower age limit for persons eligible to answer this question has been lowered given the increase in incidence of teenage pregnancies and births. Table 2.14 a provides data by age group and number of children ever born, for all females aged 10 years or more at the time of the census. The data is summarised further in Table 2.14b showing a comparison with the previous census. As can be observed from Table 2.14 b , the proportion of women aged 15 years or more with no children has decreased from $37 \%$ in 2002 to $28 \%$
in 2010. Conversely, the representation of those with 1 or 2 children has increased from $32 \%$ to $38 \%$, and the proportion at parity 3 to 4 has increased from $18 \%$ to $21 \%$ over the same period. The proportion of women with 7 children or more has decreased slightly. A question was also asked on births in the preceding 12 months. Omitting to include infants during proxy reporting in the census is quite common. A comparison with vital registration records revealed that new births were under-reported by about 12\%.

Table 2.14a: Female population aged 10 years or more by number of children ever born alive, 2010

| Age group |  |  |  |  |  |  |  |  |  |  |  |

Interpretation:
$a_{0}$ : The proportion of women in the cohort who become mothers
$a_{1}$ : The proportion of women in the cohort who have at least 1 live birth, who go on to have a second birth

### 2.10 Disability

For the first time, detailed data on disability was collected during the population and housing census. The only other population census recording data collection on this topic was that of 1971 when a single question was addressed at the household level to indicate whether there were any household members who were "handicapped" as it was specified then. Moreover, it was optional for the household to respond to the question.

In the 2010 census, the questions relating to disability were addressed at the individual level and the target population was individuals of age 5 years and above. An effort was made to include at least the 6 core questions related to disability. The questions included a general one asking if the person had any type of disability. For the affirmative responses to the general question, 5 followup questions were asked on whether the person had limitations or impairment related to sight, hearing, (sensory disabilities), speech, mobility or intellectual and/ or emotional conditions. It must be noted that due to the length of the census questionnaire, it was not practical to include detailed explanations to qualify the existence or absence of disability which would have rendered the
questions more rigorous. In light of this, the responses were, to a certain extent, subject to interpretation of the respondents, and counts of the disabled may include those with other health conditions that would not normally be classified as disability. However, the responses should at least provide a general indication on the prevalence of disability and impairment in the population.

The census enumerated 2,169 individuals who were reported to have at least one type of impairment or disability. This represents $2.6 \%$ of the eligible population. The term disabled in the broad sense will be adopted for the purpose of this report to indicate handicapped, disabled or having some type or impairment. Those reported to be disabled represent around $2.6 \%$ of the total population aged 5 years and above, out of which, $51 \%$ were females and $49 \%$ were males. $15 \%$ were aged less than 15 years, $36 \%$ were aged between 15 to 34 years, and $37 \%$ were aged between 55 to 59 years, indicating that $73 \%$ of disabled persons are in their prime working-ages. The elderly aged 60 years or more in this group represented $11 \%$.

### 2.11 Economic status of persons with disability

Table 2.15 a presents data on the economic status of persons with at least one type of disability. $73 \%$ of the disabled population is economically active; of which three quarters are employees and $16 \%$ are in self-employment. Of those who were reported to be economically inactive, $40 \%$ are elderly persons aged 60 years and above, $32 \%$ are youths aged between 15 and 24 years and $14 \%$ are in the prime working ages ( 25 to 44 years).
$73 \%$ of the disabled population is economically active.

Of these, $75 \%$ are employees and $16 \%$ are self-employed.

Table 2.15a: Persons in working ages with disability by economic status, 2010

| Economic status | No. of persons | \% |

## CHAPTER 3

## EDUCATION

### 3.1 Educational characteristics

Table 3.1: Population aged 5 years or more by school attendance and age group, 2010

|  | Attending School |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Age group | Yes | No | Not stated | Total | attending |
| 5-9 | 6,189 | 231 | 311 | 6,731 | 91.9 |
| 10-14 | 6,483 | 205 | 57 | 6,745 | 96.1 |
| 15-19 | 4,401 | 2,938 | 113 | 7,452 | 59.1 |
| 20-24 | 393 | 6,706 | 388 | 7,487 | 5.2 |
| 25-29 | 150 | 7,187 | 467 | 7,804 | 1.9 |
| 30-34 | 114 | 7,214 | 436 | 7,764 | 1.5 |
| 35-39 | 79 | 7673 | 0 | 7,752 | 1.0 |
| 40-44 | 55 | 7,230 | 0 | 7,285 | 0.8 |
| 45-49 | 51 | 6,772 | 0 | 6,823 | 0.7 |
| 50-54 | 22 | 5,431 | 0 | 5,453 | 0.4 |
| 55-59 | 14 | 3,347 | 0 | 3,361 | 0.4 |
| 60-64 | 9 | 2,619 | 0 | 2,628 | 0.3 |
| $65+$ | 19 | 6,722 | 0 | 6,741 | 0.3 |
| Total | 17,979 | 64,275 | 1,772 | 84,026 | 21.4 |

80\% of children in the typical (Seychelles) school-age years (5-19) were attending school.

49\% of the population aged 5 to 29 was reported to be attending school.

Table 3.2: Population aged 5-29 years not attending school by age group and sex, 2010

|  | \% of the corresponding <br> population not attending <br> school |  |  |
| :--- | ---: | ---: | ---: |
| Age <br> group | Female | Male | Both <br> sexes |
| $5-9$ | 3.4 | 3.5 | 3.4 |
| $10-14$ | 2.9 | 3.2 | 3.0 |
| $15-19$ | 32.4 | 46.0 | 39.4 |
| $20-24$ | 90.5 | 88.8 | 89.6 |
| $25-29$ | 93.8 | 90.7 | 92.1 |
| $5-29$ | $\mathbf{4 4 . 7}$ | $\mathbf{5 0 . 3}$ | $\mathbf{4 7 . 7}$ |

A higher proportion of boys aged 15 to 19 years are not attending school compared to the corresponding proportion of girls. Seychelles' policy of compulsory education makes provision for children to be in school for at least 10 years.

Among those not attending school, there
is a higher proportion of boys than girls
in the 15 to 19 age group who are not at school.

Overall, there are more boys than girls
in school age (5-29) who are not at school.

This allows for 6 years of primary and 4 years of secondary schooling. The global conventional school age range is 5 to 29 years. Of the population in this age range, $49 \%$ were reported to be attending school.

| University (2nd degree or higher) | 339 | 447 | 786 | 1.0 | 1.3 | 1.1 | -0.4 |
| Other | 116 | 100 | 216 | 0.3 | 0.3 | 0.3 | 0.0 |
| Not stated | 891 | 1,385 | 2,276 | 2.5 | 4.0 | 3.3 | -1.5 |
| Total | 35,463 | 34,293 | 69,756 | 100.0 | 100.0 | 100.0 |  |

The distribution of population by their highest educational attainment is presented in Tables 3.3 a and 3.3b. The former includes all residents and the latter only Seychellois nationals. The respondents eligible to answer this question were those of age 10 years or more. A comparison within each sex category suggests that the distribution for

Figure 3.1:
Educational Attainment of Population 10 years or more by Education Level, 2010

### 3.2 Literacy

According to the definition adopted for the census, a person was considered to be literate if he or she was reported to be able to read and write a simple sentence in any language. Similar to questions on education, persons eligible to answer this question were those aged 10 years or more. As mentioned in Section 2.8, some institutions provided lists of residents that excluded data on certain socio-economic variables that were difficult to obtain without personal interviews. The incidence of item non-response was especially high among expatriate workers, thus the data presented on literacy in Figure 3.2 relates to "valid percentages" which excludes the "not stated" category. The right-most panel in Figure 3.2 relates to individuals 15 years or more to allow for international comparison. All scenarios indicate slightly higher literacy levels for females.
the male and female population is very similar with small differences between sexes ranging from $0.1 \%$ to $2.2 \%$, with the exception of the category "vocational education" which shows a $3.1 \%$ lower representation for women if only nationals are considered (Table 3.3b); and $2.8 \%$ lower for females if all residents are considered.

More than 75\% of Seychellois aged 10 years or more have attained at least lower secondary school.

Half of the same population have attained at least 5 years of secondary school.
$5 \%$ of Seychellois aged 10 years or more have attained university education.

## CHAPTER 4

## ECONOMIC STATUS AND ACTIVITY

### 4.1 Economic status

The economic status of the population aged 15 years or more is presented in Table 4.1. An increase is observed in the representation of both employees and self-employed groups. The former has increased from $55.5 \%$ in 2002 to $57.7 \%$ in 2010; and the latter from $8.7 \%$ to $10.6 \%$ over the same period. Although the overall representation of employees has increased, the contribution to this rise is only from the private sector since the representation of public sector (government and parastatal) employees has actually decreased in 2010 compared to 2002. Conversely, the proportion of job seekers and
economically active population aged 15 years or more has decreased. Pertinent differences can also be observed in the distribution within sex. Within the employees group, the representation of female employees in the government is more than twice that of males, whereas among the private sector employees, the representation among males is $11 \%$ higher than females. Among the own account or self-employed workers, the male dominance is more pronounced. The proportion of males who are self employed is more than three times that of females.

Table 4.1: Population aged 15 years or more by economic status and sex, 2002 and 2010

## Population \& Housing Census 2010

### 4.2 Labour force

The labour force constitutes all persons who, in the given reference period, were either in employment or unemployed as defined in the labour force context. This includes employees, the self-employed, contributing family workers and job seekers who are without employment. It is worth noting that the scale and operations of the population and housing census does not avail the convenience and time to probe in great detail into employment circumstances of the eligible population. Labour market related questions are limited, and without follow-up qualifying questions, the results may be subject to overrepresentation of certain economic groups such as unemployed or inactive persons. Figures 4.1 and 4.2 compare the distribution of the male and female population aged 15 years and above across economic groups in the labour force and the composition across group for the two most recent censuses.

The disparity in distribution between the two sexes can be clearly seen for both years, with higher proportional representation of men in the private sector and in selfemployment, and the reverse observed among public sector workers. In terms of composition, there is a clear shift to private sector employment from $28 \%$ in 2002 to $41 \%$ in 2010 (combining both sexes), which makes the private sector the most important employing sector. Figure 4.3 shows the main subgroups of the labour force and their respective proportion. The census enumerated 52,183 persons aged 15 years or more in the labour force. $50 \%$ were employees, $43 \%$ were own-account workers (self-employed) and $6 \%$ were unemployed jobseekers.

## $72 \%$ of the population aged 15 years or more are economically active.

There is a higher proportion of females ( $31 \%$ ) who are inactive than males (20\%) in the same age group.

Figure 4.3: Sub Groups of the Labour Force, 2010

Labour force participation rates are presented for 3 consecutive censuses (1994-2010) in Table 4.2. There is a general increase in the participation rates from 1994 to 2002, and from 2002 to 2010 (see Figure 4.4). The rates among females aged between 25 and 60 years show an upward trend, while those for females younger than 20 years fluctuated from $30.4 \%$ in 1994 to $32 \% 2002$ then plunged to $26.1 \%$ in 2010. Activity rates indicate a downward trend for elderly males 60 to 64 years, but for their female counterparts, rates increased between 1994 and 2002 and dropped again in 2010. Rates above retirement ages remained stable for women between 1994 and 2010 but tended to be on the rise for men.

An analysis is made on data related to youth aged 15 to 24 separately in Table 4.3. The overall labour force participation rate was $54 \%$. This was higher for male youths at $61 \%$ compared to $46 \%$ for females in the corresponding age group. Around one third of youths were at school. The job-seekers rate among female youths was higher at $10 \%$ compared to $8 \%$ for males. Combined with the youths who were economically inactive, this gives us a vulnerable group of $14 \%$ of youths who are neither in education nor in employment.

| In education | 38 | 27 | 32 |
| Neither in <br> education nor in <br> employment | 15 | 12 | 14 |

One in every 10 youths aged 15 to 24 years are job seekers.
$14 \%$ of youths are neither in education nor in employment.

Note: * Valid percentages shown

### 4.3 Occupation and industry

Information on occupation and industry was asked of all persons aged 10 years or more. Adolescents aged less than 15 years who reported to be economically active constitute less than $0.3 \%$ of the eligible population. Hence, only data for individuals aged 15 years or more are included in the analysis.

The distribution of working population by occupation and sex is presented in Table 4.4. The breakdown aggregates the occupation to the major groups of the ISCO 2008 classification. About one fifth of this population work as service and sales workers. One in every ten is a professional and $7 \%$ work in managerial positions. Those working in elementary occupations and craft and related trade, account for a proportion of $16 \%$ each of the total working population, making them the largest of the major occupation groups.

The distribution across occupational groups differs between male and female workers. Some of the salient differences are indicated here. There is a higher representation of professionals (twice as high) among women than the corresponding proportion among men. This may be explained by the pre-dominance of female workers in areas of health and education. The proportion of clerical support workers are five times as high among female workers compared to that among male workers. With regards to service and sales workers, the representation among women is double that of men. On the other hand, the male-dominated occupations seem to be mostly in craft and related trade jobs where the male representation is $26 \%$ compared to a mere $3 \%$ proportion for women. A similar trend is observed in the occupations falling in major group plant and machinery operators and assemblers. However, in managerial positions, men and women are equally represented.

Table 4.4: Working population by major occupational groups and sex, 2010

| Occupation (major group) | Female | \% | Male | \% | Total | \% |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Managers | 1,491 | 6.9 | 1,943 | 7.0 | 3,434 | 7.0 |
| Professionals | 2,802 | 13.0 | 1,814 | 6.6 | 4,616 | 9.4 |
| Technicians and Associate Professionals | 2,132 | 9.9 | 2,646 | 9.6 | 4,778 | 9.7 |
| Clerical Support Workers | 2,338 | 10.8 | 606 | 2.2 | 2,944 | 6.0 |
| Service and Sales Workers | 6,760 | 31.3 | 4,041 | 14.6 | 10,801 | 22.0 |
| Skilled Agricultural, Forestry and Fishery Workers | 349 | 1.6 | 1,922 | 7.0 | 2,271 | 4.6 |
| Craft and Related Trade Workers | 655 | 3.0 | 7,298 | 26.5 | 7,953 | 16.2 |
| Plant and Machine Operators and Assemblers | 613 | 2.8 | 2,832 | 10.3 | 3,445 | 7.0 |
| Elementary Occupations | 3,882 | 18.0 | 3,803 | 13.8 | 7,685 | 15.6 |
| Armed Forces | 23 | 0.1 | 261 | 0.9 | 284 | 0.6 |
| Not Stated | 536 | 2.5 | 423 | 1.5 | 959 | 2.0 |
| Total | 21,581 | 100.0 | 27,589 | 100.0 | 49,170 | 100.0 |

The working age population can be divided into three main groups: youth ( $15-24$ years), prime working age ( $25-44$ years) and older working age ( $45-64$ years). In this report, workers aged 65 years or more are included in the last age group. Table 4.5 provides a distribution of the working population across the main working age groups for each of the major occupational category.

For almost all occupational groups, over half of the workers are in the prime working age with the exception of the armed forces occupation group which displays a youthful working-age population. The same information is presented graphically in Figure 4.5 in which the general pattern across occupational categories can be observed for each age group.

## Population \& Housing Census 2010

Table 4.5: Working population by occupation and working age group, 2010

|  | Working age group |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| Occupation (major group) | $\begin{aligned} & \text { Youth } \\ & (15-24) \end{aligned}$ | $\begin{array}{r} \text { Prime } \\ (25-44) \end{array}$ | Older $(45+)$ | Total |
| Managers | 4.4 | 50.7 | 44.9 | 100.0 |
| Professionals | 12.2 | 58.5 | 29.4 | 100.0 |
| Technicians and Associate Professionals | 16.3 | 59.9 | 23.8 | 100.0 |

| Total | 16.2 | 55.1 | 28.7 | 100.0 |

Table 4.6 looks at the sex distribution of the working population across the main industrial activity according to the UN ISIC Rev 4 classification. The industry with the largest group of workers is accommodation and food service activities, accounting for around $15 \%$ of all workers, followed by the construction industry which employs $11 \%$ of the working population. The industrial sectors exhibiting the widest disparities between sexes
are manufacturing, accommodation and food service activities, public administration, education and health services, where the corresponding representation is higher for female workers. In water supply, sewerage and waste management and in construction industries, male representation is higher.

Table 4.6: Working population by industry and sex, 2010

| ISIC Section | Industry | Female | \% | Male | \% | Total | \% |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## Population \& Housing Census 2010

### 4.4 Employment status and hours worked

Individuals who were in employment were categorized in three major groups of employment status; full-time, part-time and casual workers. Table 4.7 presents the distribution of employed persons by employment status and sex. $91.5 \%$ of workers were employed full time, $4.5 \%$ worked part time and $4 \%$ worked on a casual basis. The proportional distribution across employment status categories differ for male and female workers. There is a higher proportion of full time female workers ( $93.8 \%$ ) than male workers ( $89.6 \%$ ), and the representation of casual male workers is 6 times higher than that of female workers.

Table 4.7: Working population by employment status, 2010

| Employment status | Female | Male | Total |
| :--- | ---: | ---: | ---: |
| Casual | 243 | 1,738 | 1,960 |
| Full time | 20,245 | 24,716 | 44,978 |
| Part time | 1,093 | 1,135 | 2,232 |
| Total | $\mathbf{2 1 , 5 8 1}$ | $\mathbf{2 7 , 5 8 9}$ | $\mathbf{4 9 , 1 7 0}$ |
|  | $(\%)$ | $(\%)$ | $(\%)$ |
| Casual | 1.1 | 6.3 | 4.0 |
| Full time | 93.8 | 89.6 | 91.5 |
| Part time | 5.1 | 4.1 | 4.5 |
| Total | $\mathbf{1 0 0 . 0}$ | $\mathbf{1 0 0 . 0}$ | $\mathbf{1 0 0 . 0}$ |

> 9 out of 10 of the working population are in full-time employment.

Table 4.8: Mean number of hours worked by age group and sex, 2010

|  | Mean number of hours worked per week |  |  |
| :---: | :---: | :---: | :---: |
| Age group (years) | Female | Male | Both sexes |
| 15-19 | 44 | 44 | 44 |
| 20-24 | 44 | 46 | 45 |
| 25-29 | 43 | 46 | 45 |
| 30-34 | 43 | 47 | 45 |
| 35-39 | 42 | 46 | 44 |
| 40-44 | 43 | 47 | 45 |
| 45-49 | 42 | 48 | 45 |
| 50-54 | 42 | 47 | 45 |
| 55-59 | 41 | 46 | 44 |
| 60-64 | 39 | 46 | 43 |
| $65+$ | 42 | 46 | 45 |
| Total | 43 | 47 | 45 |

On average, men work longer hours than women.

The question on number of hours worked per week was also a new one in the context of a population and housing census. The mean number of hours worked per week was 43 for female workers, 47 for male workers and an average of 45 for all workers. The distribution across age groups (presented in Table 4.8) indicates that on average, male workers put in a higher number of working hours per week than female workers. The pattern can be observed in the graphical representation in Figure 4.1.

### 4.5 Unemployed job seekers

A total of 3,013 individuals aged 15 years or more claimed to be unemployed and seeking work during the 2010 census. It was not established how many were actually actively seeking work and it should be noted that this group may include discouraged job seekers who would normally be excluded in computing the unemployment rate under the strict (ILO) definition of "unemployment" The demographic profile of these persons is presented in Table 4.9. $54 \%$ of job seekers were females and $46 \%$
were males. $43 \%$ are youths aged between 15 and 24 years. Two thirds ( $66 \%$ ) are aged less than 30 years. A comparison of the distribution within each sex indicates a lower proportion of female job seekers in the youngest age group (less than 20 years) and in the age groups 45 to 59 years compared to their male counterparts. The proportional representation is higher for females in all other age groups.

Table 4.9: Age and sex profile of job seekers, 2010

| Age group | Female | \% | Male | \% | Total | \% | $\begin{array}{r} \text { Sex } \\ \text { differentials } \\ (\mathrm{F}-\mathrm{M}) \end{array}$ | Cumulative |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 15-19 | 302 | 18.6 | 322 | 23.1 | 624 | 20.7 | -4.5 | 20.7 |

## Population \& Housing Census 2010

### 4.6 Duration of time wanting work

Table 4.10 groups job seekers according to the length of time they sought work. Around $3 \%$ of job seekers had been without work for less than 1 month and another $25 \%$ of them reported they were without work for durations of 1 to 3 months, while $12.5 \%$ said they had been a job seeker for 4 to 6 months. It is suspected that half of the job seekers have not actually been actively seeking work but the census questionnaire did not provide qualifying questions to ascertain a reference period of actively seeking work and means of seeking work. The figures as reported puts the unemployment rate at around 6\%, but it is more likely to be around $3 \%$ to $4 \%$ if one were to consider only those who claim to have sought work for less than 2 years. A Labour Force Survey (LFS) provides a better design for measuring unemployment more accurately.

Table 4.10: Job seekers by duration of time wanting work, 2010

| Duration | No. of persons | \% |
| :--- | ---: | ---: |
| Less than 1 month | 88 | 2.9 |
| 1 - 3 months | 737 | 24.5 |
| $4-6$ months | 376 | 12.5 |
| $7-11$ months | 267 | 8.9 |
| $1<2$ years | 325 | 10.8 |
| $2<3$ years | 190 | 6.3 |
| 3 years + | 242 | 8.0 |
| Not stated | 788 | 26.2 |
| Total | $\mathbf{3 , 0 1 3}$ | $\mathbf{1 0 0 . 0}$ |

Anse Aux Pins, Mont Buxton, Pointe Larue, Anse Etoile, Cascade and Anse Boileau were the districts accounting for the majority of job seekers with representations of between 5.0\% to 5.5\% each.

La Digue, Takamaka, Elacis and Baie Sainte Anne Praslin accounted for the lowest proportions with less than 3\% each.

Table 4.11: Job seekers by district of residence, 2010

| District | No. of job seekers | \% |
| :---: | :---: | :---: |
| Anse Aux Pins | 165 | 5.5 |

| Total | 3,013 | 100.0 |

## CHAPTER 5

## HOUSING AND HOUSEHOLDS

### 5.1 Housing and household characteristics

A total of 25,931 houses were counted in the census, of which around $92 \%$ were occupied. The occupied dwellings comprised 24,770 households, indicating that around 1,000 households live in shared dwellings. The household size (number of persons) ranges from 2.9 on outer islands to 4.5 in the Roche Caiman district. A comparison between 2002 and 2010 shows a small
decline of 0.2 in the overall average household size. However, a look at this indicator at district level shows that it has increased in a few areas, namely Au Cap, La Digue, Port Glaud, Roche Caiman and other islands. The average household size has remained the same in the Baie Lazare and English River districts compared to 2002.

Table 5.1: Houses and occupancy status, households and household size by district, 2010

| District | Occupied Houses | Vacant houses | Total houses | Households | Household size 2010 | Household size 2002 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Anse Aux Pins | 1,038 | 87 | 1,125 | 1,067 | 3.6 | 3.9 |
| Anse Boileau | 981 | 89 | 1,070 | 1,044 | 3.8 | 4.3 |
| Anse Etoile | 1,308 | 75 | 1,383 | 1,333 | 3.5 | 4.0 |

| Roche Caiman | 705 | 26 | 731 | 725 | 4.5 | 4.0 |
| Saint Louis | 825 | 60 | 885 | 880 | 3.6 | 4.1 |
| Takamaka | 745 | 97 | 842 | 777 | 3.6 | 4.0 |
| Total | 23,770 | 2,161 | 25,931 | 24,770 | 3.7 | 3.9 |

### 5.2 Tenure

$71 \%$ of households own the dwelling they live in. This proportion represents an increase of 3 percentage points over the proportion in 2002. On the other hand, households occupying dwellings rented from the government represent a little over $10 \%$ in 2010 compared to $17 \%$ in 2002. There was an increase in households living in privately rented dwellings and those occupying dwellings for free (Table 5.2).

Table 5.2: Tenure of dwellings, 2002 and 2010

| Tenure of dwelling | $\mathbf{2 0 1 0}$ | $\%$ | 2002 | $\%$ |
| :--- | ---: | ---: | ---: | ---: |
| Owner occupied | 17,524 | 70.7 | 14,177 | 67.7 |
| Rented from <br> government | 2,603 | 10.5 | 3,591 | 17.2 |
| Rented privately | 2,149 | 8.7 | 1,471 | 7.0 |
| Rented from <br> private employer | 146 | 0.6 | 117 | 0.6 |
| Rent free | 2,348 | 9.5 | $\mathbf{1 , 5 7 7}$ | 7.5 |
| Total | $\mathbf{2 4 , 7 7 0}$ | $\mathbf{1 0 0 . 0}$ | $\mathbf{2 0 , 9 3 3}$ | $\mathbf{1 0 0 . 0}$ |

### 5.3 Construction type

Construction of dwellings referred to the main building material of the walls of the dwelling unit. Responses were recorded as observed by the interviewer. Figure 5.1 traces the changing trends over the last 3 decades. Construction dwellings made of palm or lattice is now almost non-existent except maybe in isolated circumstances, and dwellings with wooden and/or iron walls are rapidly declining. Of the 2,161 vacant houses, $77 \%$ were made of stone or block and $23 \%$ of wood and/or iron. The figures are also presented in Table 5.3.

In the 2010 census, 7 out of 10 households owned the dwelling they occupy.

The proportion of dwellings constructed of stone or blocks has increased from $\mathbf{2 9 \%}$ in 1971 to $85 \%$ in 2010.

## Population \& Housing Census 2010

Table 5.3: Housing stock by construction material of walls, 1971-2010

| Wall construction material | 2010 <br> (no. of houses) | $\mathbf{2 0 1 0}$ <br> (\%) | $\mathbf{2 0 0 2}$ <br> $(\%)$ | 1994 <br> $(\%)$ | 1987 <br> $(\%)$ | 1977 <br> $(\%)$ | 1971 <br> $(\%)$ |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
| Stone / Block | 20,347 | 85 | $\mathbf{7 9}$ | 67 | 56 | 39 | 29 |
| Wood / Iron | 3,414 | 15 | 21 | 33 | 44 | 57 | 62 |
| Palm / Lattice | 9 | 0 | 0 | 0 | 1 | 4 | 9 |
| Total | 23,770 | 100 | 100 | 100 | 100 | 100 | 100 |

Interviewers also assessed the physical condition of dwelling based on soundness of the structure and roof and the likeliness of needing repairs in the near future. $83 \%$ of houses were assessed as good, meaning the dwelling looked completely watertight, as well as solidly
built. 7\% were assessed as poor, meaning that it was probably leaking, and looked as if it would need major repairs done in the next few years. The remaining $9 \%$ were categorised as falling somewhere in between good and poor.

Table 5.4: Houses by material of construction and state of repair of dwelling, 2010

| Physical condition of dwelling |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Material of wall construction | Good | Poor | Fair | Not stated | Total |
| Stone / Block | 18,101 | 691 | 1,286 | 218 | 20,347 |
| Wood / Iron | 1577 | 874 | 896 | 118 | 3,414 |
| Palm / Lattice | 2 | 5 | 2 | 0 | 9 |
| Total | 19,680 | 1,570 | 2,184 | 336 | 23,770 |
| \% | 82.8 | 6.6 | 9.2 | 1.4 | 100.0 |

Households are classified according to the use of the building occupied. Almost three quarters of households were still based in single housing units in 2010 although comparison data from past censuses show an increasing representation of households in shared buildings (Table 5.5). This phenomenon is inevitable as space for dwelling construction becomes scarce and business and other
development continue to compete for space. Residents living in non-institutional households constitute $94 \%$ of the population, and $99 \%$ of all households (Table 5.6). The institutional population includes such accommodation as convents, hospitals, prisons, barracks, hotels and orphanages.

Table 5.5: Households by type of dwelling (use), 2002 and 2010

|  | No. of households | 2010 \% | 2002 \% |
| :---: | :---: | :---: | :---: |
| Type of dwelling |  |  |  |
| Building used wholly as one housing unit | 18,148 | 73.3 | 81.0 |
| Building containing more than one housing unit (e.g. block of flats) | 5,484 | 22.1 | 16.3 |
| Partly residential | 535 | 2.2 | 2.1 |
| Institution | 137 | 0.6 | 0.4 |
| Homeless | 6 | 0.0 | 0.0 |
| Not stated | 460 | 1.9 | 0.1 |
| Total | 24,770 | 100.0 | 100.0 |

Table 5.6: Households and population by status of dwelling, 2010

| Status of Dwelling | Population | \% | No. of households |  |
| :--- | ---: | ---: | ---: | ---: |
| Normal household | 85,147 | 93.6 | 24,525 | $\%$ |
| Institution | 5,798 | 6.4 | 245 | 99.0 |
| Total | 90,945 | 100.0 | $\mathbf{2 4 , 7 7 0}$ | 1.0 |

### 5.4 Size of living quarters

The measurement of size of living quarters provides a means to assess over crowdedness in households. The number of "rooms" used for living excluded bathrooms and toilets as well as passages (corridors) and verandahs, unless those were regularly used for living in or sleeping. Such enclosures also had to have permanent partitions, (i.e., not curtains or screens). The average number
of rooms per household is presented separately for normal households and institutions. Table 5.7 excludes households for which size of dwelling was not reported. The average number of rooms for normal households was 4.8 and for institutions the average number of rooms was 5.3.

Table 5.7: Average number of rooms by status of dwelling, 2010

| Status of Dwelling | Dwellings | Total rooms | Average no. of rooms |
| :--- | ---: | ---: | ---: |
| Normal household | 23,972 | 114,527 | 4.8 |
| Instifution | 120 | 635 | 5.3 |

## CHAPTER 6

UTILITIES, SANITATION \& TELECOMMUNICATION

### 6.1 Water supply

Over $93 \%$ of households have access to treated water from the main supply. Less than $5 \%$ of households draw water from rivers and the same proportion harvest rain water. It is not known whether more households are
harvesting rain water than previously as it is the first time this question is asked in the population and housing census. Almost half of households keep water tanks at home (Table 6.1).

Table 6.1: Type of water supply and water storage, 2010

| of which: | Mains (Public utilities) | No. households | \% of total households |
| :---: | :---: | :---: | :---: |
|  | Treated | 23,111 | 93.3 |
|  | Untreated | 6 | 0.0 |
|  | Unknown if treated | 2 | 0.0 |
|  | Not stated | 1,445 | 5.8 |
|  | Other piped supply | 2,418 | 9.8 |
|  | Treated | 325 | 1.3 |
|  | Untreated | 2,079 | 8.4 |
|  | Unknown if treated | 14 | 0.1 |
|  | River or well | 1,101 | 4.4 |
|  | Rain water harvest | 1,110 | 4.5 |
|  | Has water tank | 11,678 | 47.1 |

The proportion of households accessing treated water years as can be observed in Figure 6.1 from the mains supply has increased steadily over the

Figure 6.1: Treated Water Supply, 1987-2010

## Population and Housing Census 2010

### 6.2 Sanitation

Basic sanitation is of crucial importance to the preservation of human health, for personal hygiene and for protection against waterborne diseases. The installation and access to good sanitation facilities has seen progressive improvements over the last 25 years. Although development of sewerage systems started in the 1980's ${ }^{3}$, there was no large-scale connection to domestic households. The population and housing census only started recording data on household connections to sewerage systems in 2002. By then only $7 \%$ of households reported to be connected. This representation had
doubled in 2010. To date, only households in the north of Mahe and the central region have access to the main sewerage system. In 2010, $97 \%$ of households had flush toilets of which $85 \%$ was connected to septic tanks and $15 \%$ to the sewerage system. Pit latrines in households have almost phased out, but 211 or $1 \%$ of households reported to be using them still. Households with this type of toilet are spread over all districts on Mahe, Praslin and La Digue, with the majority (64\%) found in Grand Anse Praslin, Takamaka, Anse Royale, Anse Boileau, Baie Lazare, Baie Sainte Anne and Anse Aux Pins districts.

Table 6.2: Type of toilet facilities, 1987-2010 - (Percentage distribution)

|  | Census year |  |  |  |
| :--- | ---: | ---: | ---: | ---: | ---: |
| Type of toilet | 1987 | 1994 | 2002 | 2010 |$|$|  |  |
| ---: | :--- |
| Flush connected to <br> septic tank | 62 |

Figure 6.2: Toilet Facilities

[^2]
### 6.3 Waste disposal

Data was collected on household waste disposal for the second consecutive census. A comparison is made
between this and the last census (Table 6.3 and Figure 6.3).

Table 6.3: Domestic waste disposal, 2002 and 2010

|  | 2010 |  | 2002 |
| :--- | ---: | ---: | ---: |
| Means of disposal | No. of <br> households | \% of <br> households | \% of <br> households |
| Public bin | 23,334 | 94.2 | 86.3 |
| Buried or burned | 4,823 | 19.5 | 22.4 |
| Private dumpsite | 430 | 1.7 | 3.5 |
| Composting | 2,775 | 11.2 | 8.0 |

There was an increase in use of public bins in 2010 compared to 2002 and proportionally less households either burying or burning their waste. A higher percentage
of households are now making compost. A few households reported that they recycled domestic waste (other than composting).

Figure 6.3: Means of Waste Disposal, 2002 and 2010

## Population and Housing Census 2010

### 6.4 Energy for lighting and cooking

Table 6.4: Type of energy used for lighting and cooking, 2002 and 2010

|  | 2010 |  | 2002 |  | (2010 Census) |

| Charcoal | 9 | 0.0 | 22 | 0.1 |  |
| No cooking | 257 | 1.0 | 197 | 0.9 |  |
| Not stated | 443 | 1.8 | 323 | 1.5 |  |
| Total | 24,770 | 100.0 | 20,933 | 100.0 |  |

### 6.5 Other household amenities, information and telecommunication

The water heater is gaining importance among facilities found in the home. 39\% of households reported having a water heater. Three types of energy are being used for their operation. $74.2 \%$ are electric water heaters, 17.4\%
are solar heaters and $8.4 \%$ are gas-operated water heaters. $93.4 \%$ of households had either a refrigerator or a freezer or both, and washing machines were found in 69.4\% of households.

Table 6.5a: Number of households with selected facilities, 2010

| Type of water <br> heater | No. of <br> households | \% |
| :--- | ---: | ---: |
| Electric | 7,091 | 74.2 |
| Solar | 1,664 | 17.4 |
| Gas | 798 | 8.4 |
| Total | 9,553 | 100.0 |
|  |  |  |
| Other amenities | 23,129 | 93.4 |
| Refrigerator/freezer | 17,199 | 69.4 |
| Washing machine |  |  |

Table 6.5b: Households with access to media at home, 2010

| has |
| of |

households in 2010
compared to $57 \%$ in 2002 ,
while the penetration of
computers in 2010 has more
than tripled since 2002 .
There are at least 57,012
mobile telephone units and
over 12,000 PCs being used
in the home.

Figure 6.3: Internet penetration via computer \& mobile phone in households, 2010

## CHAPTER 7

TRANSPORT AND OTHER ASSETS

### 7.1 Transport and other assets

Table 7.1: Household ownership of land transport and/or boat, 2002 and 2010

| Type of transport/ <br> asset | No. of <br> households | $\%$ <br> $(2010)$ | \% <br> (2002) |
| :--- | ---: | ---: | ---: |
| Truck | 1,439 | 5.8 |  |
| Car' | 5,061 | 20.4 | 20.6 |
| Motor cycle | 159 | 0.6 | 0.6 |
| Bicycle | 1,759 | 7.1 | 5.6 |
| Boat for business | 409 | 1.7 | 1.6 |
| Boat for pleasure | 462 | 1.9 | 2.0 |

In 2010, 27\% of households
had their own motorised land transport compared to $21 \%$ in 2002.

Note: (1) - For 2002, the proportion for car includes all other motorised transport

In 2002, one in every 5 households had their own motorised land transport. In 2010, this increased to approximately one in every 4 households. For sea
transport, the proportional representation of households owning boats either for business or pleasure did not change much between 2002 and 2010.

Language

## CHAPTER 8

## LANGUAGE

### 8.1 Main language used in the home

Seychelles recognises three official languages in the work place and in the educational system. They are Creole (the mother tongue for the majority of the population), English and French. The census asked households to specify the main language used to communicate at home. Table 8.1 presents the proportion of households making use of the various languages and also makes a comparison
with data from the 2002 census. The proportional representation of the use of Creole at home decreased from $91.8 \%$ in 2002 to $89.1 \%$ in 2010. The proportion using English increased slightly from $4.9 \%$ to $5.1 \%$ over the same period. The percentage of households using other languages increased from $2.4 \%$ in 2002 to $3.8 \%$ in 2010.

Table 8.1: Main language spoken at home, 2002 and 2010

| Main spoken <br> language | No. of <br> households | $(2010)$ <br> $\%$ | (2002) <br> $\%$ |
| :--- | ---: | ---: | ---: |
| Creole | 22,073 | 89.1 | 91.8 |
| English | 1,256 | 5.1 | 4.9 |
| French | 165 | 0.7 | 0.8 |
| Other | 932 | 3.8 | 2.3 |
| Not stated | 344 | 1.4 | 0.2 |
| Total | $\mathbf{2 4 , 7 7 0}$ | $\mathbf{1 0 0 . 0}$ | $\mathbf{1 0 0 . 0}$ |

> The language mostly spoken in the home is Creole followed by English.

## CHAPTER 9

## CRIME

### 9.1 Crime

A question on the experience of crime was asked in the census for the first time. Statistics on crime published so far relates only to crimes reported to the police. It is understood that not all crimes are reported and attempts by the NBS are now being made to improve on the measurement of actual incidence of crime in the country by collecting crime experience (or victimisation) from
households. The enquiry from the census will be followed by a full sample survey on the subject in due course. 4,062 households or $16 \%$ of all households reported to have been victims of crime in the 12 months preceding the census. Of these, 2,979 (73.3\%) reported the incident to the police.

Table 9.1: Crime experience at household level, 2010

|  | No. of <br> households |  |
| :--- | ---: | ---: |
| Experienced <br> crime | 4,062 | $16.44^{(1)}$ |
| of which: <br> reported to <br> the police | 2,979 | $73.3^{(2)}$ |

One in every 6 households experienced crime during the 12 months preceding the census.

[^3]

## CHAPTER 10

## AGRICULTURE \& FISHING

### 10.1 History of agriculture and fishing in Seychelles

The population and housing census in Seychelles has been collecting data on farming and fishing activity in each census since 1971. The data refers only to household activity and does not include non-household agricultural enterprises. The data on livestock numbers, therefore, should not be considered as the total livestock in the country. There are a number of large pig breeding enterprises not included as well as a number of large
poultry producers, both broilers and layers. These poultry producers alone would have a stock in excess of 200,000 birds at any point in time. Censuses were conducted in 1971, 1977, 1987, 1994, 2002 and 2010. Questions on farming (crop growing), livestock and fishing were included in all these censuses. In this chapter, data is presented for selected years where these are available.

Table 10.1a: Number of persons and number of households, 1971-2010

| Year | Population | Households |
| :--- | ---: | ---: |
| 1971 | 54,695 | 10,946 |
| 1977 | 61,898 | 12,664 |
| 1987 | 68,598 | 15,118 |
| 1994 | 74,331 | 17,107 |
| 2002 | 81,755 | 20,933 |
| 2010 | 90,945 | 24,770 |

The censuses asked questions at the household level on summary of the data is provided in Table 10.1b. farming (crop growing), raising livestock and fishing. A

Table 10.1b: Number and percentage of households by agricultural and fishing activity, 1987-2010

| Census <br> Year | Households | Farming |  | $\%$ | Raising <br> Livestock | \% | Fishing | \% |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
| 1987 | 15,118 | 2,872 | 19 | 6,528 | 43 | n.a. | n.a. |  |
| 1994 | 17,107 | 2,779 | 16 | 5,055 | 30 | 1,135 | 7 |  |
| 2002 | 20,933 | 4,685 | 22 | 3,630 | 17 | 2,483 | 12 |  |
| 2010 | 24,770 | 8,662 | 35 | 3,061 | 12 | 3,484 | 14 |  |

## Population and Housing Census 2010

### 10.2 Crop farming

For households growing crops, additional information was collected on the main crop type, whether selling and purpose of crop production. The census also established whether farming was the main source of household
income for the previous censuses but not for the 2 most recent ones. The data, to the extent that it is available and comparable is presented in Table 10.2

Table 10.2: Number of households by purpose of crop production, 1977-2010

| Census Year | Households | Farming | Mainly for sale | Selling surplus | Mainly Subsistence | Selling | Selling Vegetables | Selling Fruit | Main source of HH income |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1977 | 12,664 | n.a. | n.a. | n.a. | n.a. | n.a. | 594 | 259 | 339 |
| 1987 | 15,118 | 2,872 | 345 | 368 | n.a. | 721 | n.a. | n.a. | 332 |
| 1994 | 17,107 | 2,779 | n.a. | n.a. | n.a. | 2,025 | n.a. | n.a. | 237 |
| 2002 | 20,933 | 4,685 | 539 | 607 | 3,539 | 1,321 | 940 | 636 | n.a. |
| 2010 | 24,770 | 8,662 | 503 | 477 | 7,468 | 1,590 | n.a. | n.a. | n.a. |

Components may not add to total due to 'not stateds'

The number of households recorded as farming (growing crops) has increased over the years and now represents some $35 \%$ of all households. There was a particularly sharp increase between 2002 and 2010 (up from 22\% to $35 \%$ ). This may be due in part to how the question was worded since in 2010 all growers, however small, were
included whereas in earlier years the household had to consider themselves as growing crops. The number of households producing mainly for sale and selling surplus has increased significantly since 1987 although a small decline was registered between 2002 and 2010.

Figure 10.1: Households Engaged in Agricultural Activities, (1987-2010)

### 10.3 Livestock rearing

For households raising livestock, additional information was collected on the types and numbers of livestock raised (Table10.3a).

Table 10.3a: Number of households raising livestock by type of livestock raised, 1977-2010

| Year | Households | Raising Livestock | Cattle | Pigs | Goats | Chickens | Local Chickens | Rabbits | Ducks |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1977 | 12,664 | n.a. | 787 | 4,926 | n.a. | 6,498 | n.a. | n.a. | 765 |
| 1987 | 15,118 | 6,528 | 698 | 2,332 | 110 | 5,140 | n.a. | 380 | 150 |
| 1994 | 17,107 | 5,055 | n.a. | n.a. | n.a. | n.a. | n.a. | n.a. | n.a. |
| 2002 | 20,933 | 3,630 | 329 | 784 | 97 | n.a. | 2,042 | n.a. | n.a. |
| 2010 | 24,770 | 3,061 | 208 | 469 | 171 | 2,074 | 1,932 | 160 | 176 |

The number of households raising livestock has declined significantly since 1977. Only 208 households were recorded as raising cattle in 2010 (compared with 787 in 1977). For pigs, only 469 households were recorded as raising pigs in 2010 (compared with 4,926 households in
1977). The introduction of legislation concerning the keeping of livestock and poultry has significantly affected the numbers of households raising livestock. The numbers of livestock kept have also declined with a very significant decline in cattle numbers between 2002 and 2010.

Table 10.3b: Numbers of livestock and poultry by type, 1971-2010

| Year | Cattle | Pigs | Goats | Chickens Total | Local Chickens | Rabbits | Ducks |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1971 | 1,741 | 7,356 | n.a. | 56,284 | n.a. | n.a. | 7,143 |
| 19771 | 1,617 | 9,077 | n.a. | 80,915 | n.a. | n.a. | 4,690 |
| 1987 | 1,527 | 4,530 | 323 | 106,884 | n.a. | 2,097 | 3,465 |
| 1994 | 1,156 | 8,302 | n.a. | 92,891 | 48,771 | n.a. | 2,266 |
| 2002 | 1,467 | 6,073 | 406 | 87,577 | 26,953 | n.a. | 3,125 |
| 2010 | 649 | 5,504 | 1,180 | 132,416 | 21,063 | 779 | 1,464 |

### 10.4 Fishing

Table 10.4a: Number of households by purpose of fishing, 1994-2010

| Year | Households | Fishing | Mainly for sale | Selling surplus | Surplus given away | For Pleasure | For Consumption | Not Stated |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1994 | 17,107 | 1,135 ${ }^{2}$ | 477 | 252 | n.a. | n.a. | n.a. | 406 |
| 2002 | 20,933 | 2,483 | 538 | 130 | 71 | 1,647 | 10 | 87 |
| 2010 | 24,770 | 3,484 | 608 | 167 | n.a. | 1,711 | 797 | 201 |

Note: (1) - Household sector only, excludes large farms and outlying islands
(2) - Households selling fish only

## Population and Housing Census Report 2010

Table 10.4b: Number of households by ownership of fishing boat and/or fishing gear, 1994-2010

| Year | Households | Fishing | Own Boat Own Gear | Own Boat No Gear | Total Own Boat | No Boat Own Gear | Tołal Own Gear | No Boat No Gear | Not Stated |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1994 | 17,107 | 1,135 ${ }^{3}$ |  |  | 358 |  | 633 |  | 144 |
| 2002 | 20,933 | 2,483 |  |  | 651 |  | 1,559 |  |  |
| 2010 | 24,770 | 3,484 | 790 | 39 | 829 | 1,747 | 2,537 | 908 |  |

Note: (3) - Households selling fish only

The number of households going fishing has increased steadily over the years and now accounts for $14 \%$ of all households. The increase is also reflected in the number
of households owning their own boat and/or their own fishing gear. The largest group of households fish for pleasure but also consume their catch.

## Extract from Census Act (CAP 25)

8
(a) A census officer or any person lawfully required under section 5 to give assistance towards the taking of the census, who refuses to perform or neglects to use reasonable diligence in performing any duties imposed upon him by this Act or any person who hinders or obstructs another person in performing such duty or in obeying a written order of the Census Commissioner; or
(b) any census officer who intentionally puts any offensive or improper question, or knowingly makes any false return or, without previous sanction of the Census Commissioner discloses any information which he has received by means of, or for the purpose of a census return; or
(c) any person occupying any property, house, enclosure, vessel or other place who refuses to allow a census officer reasonable access as he is required by section 6 ; or
(d) any person who intentionally gives a false answer to, or refuses to answer to the best of his knowledge or belief, any questions asked of him by a census officer which he is legally bound by section 7 to answer; or
(e) any person who removes, obliterates, alters or damages before the completion of one calendar month following the final date of enumeration or survey as published in the official gazette, any letters, marks or numbers which have been painted of affixed for the purposes of the census ; or
(f) any person who fails without reasonable excuse to perform a duty imposed upon him by this Act; or
(g) any person obstructing, assaulting or molesting any census officer in the performance of any duty under this Act

## shall be guilty of offence, and shall, on conviction be liable to pay a fine or to imprisonment or both

In summary, any occupier must allow a census officer access and everybody must answer questions asked by the census officer. It is an offence under Section 8 for any person not to answer any questions truthfully or to obstruct a census officer in any way from completing the questionnaire.

It is also an offence for a census officer to ask an improper question, to knowingly make a false return, or to disclose any information to anyone other than another census officer.
